

# Compliance

Who gets the final say in implementing privacy protection?

WHO?

## Compliance-independent

Some technologies can actively prevent the recording by a camera device without the need for cooperation or agreement with the device user. For example, infrared light or retroreflective materials can be used for this purpose. The advantage of these systems is that they do not require any compatibility compliance.

# Compliance

## Impulses

In what way can I restrict recordings I do not want?  
Do I need a device for this? Are there locations  
where devices that could block recordings should  
not be used or are forbidden?

There are cards to help you finding an answer to Anne's questions. Have a look at these categories:

Enforcement: **Kind of Enforcement**

Communication: **Channel**

Participation: **Inclusion & Exclusion**

Responsibility: **Responsible Party**
